ELSEVIER

What is SAML SSO?

- Security Assertion Markup Language Single-Sign On (SAML SSO) is a way for users to access multiple websites or applications without having to remember separate usernames and passwords for each one.
- It works like a master key that allows users to log into different websites or applications using one set of credentials.
- It relies on you validating that your users are who they say they are.

Benefits of SSO

- Secure means of access
- One set of credentials for users
- You are in control of users
- Onsite and remote access
- Allows for personalization
- Privacy preserving

Setup Options

1. Bilateral: Direct metadata exchange with your systems.
2. Multi-lateral:* Metadata exchange with your systems via federations, e.g., InCommon.

*Not available yet.

SAML SSO vs. Username/Password

SAML SSO

What is it?

- Authentication method with enhanced security.
- Works like a master key that allows you to log in to different websites or applications using just one set of credentials.

What are the benefits?

- One set of credentials for users to manage.
- Providers can sign into ClinicalKey AI with their same organizational network credentials.
- Personalize and use ClinicalKey AI anywhere.

How is it set up?

- Requires collaboration with customer's IT team to configure exchange of metadata.
- Users need not take any action.
- Password reset is managed in customer's identity system.

Username/Password (Managed User Invite)

What is it?

- Basic authentication for individual users.
- Email-based username.
- Strong password.
(Minimum 8 characters with at least 3 of the following 4 types of characters: a lower-case letter, an upper-case letter, a number, a special character [such as !@#\$%^&*].)

What are the benefits?

- Widely supported and familiar.
- Personalize and use ClinicalKey AI anywhere.

How is it setup?

- Requires the customer to give Elsevier a list of users for manual upload.
- Upon creation, users receive invitation email with link to set password.
- Password reset is managed in Elsevier's identity system.

EHR Integration with SMART on FHIR (Epic)

Username/Password or SAML SSO + SMART on FHIR

What is it?

- Authentication method with enhanced security
- Makes it easier for healthcare systems to securely share information across various platforms

What are the benefits?

- Seamless access from within an EHR session
- Improved interoperability leading to enhanced patient care—allows CK AI to be opened within the EHR for faster insights on a patient's condition
- Links to existing SAML or Username/Password profile to maintain personalization and conversation history
- Overall, helps make healthcare more connected, efficient, and patient-centered

How is it set up?

- Requires collaboration with customer's IT and Epic teams to verify Interconnect setup and configure FDI record and Activity link
- Requires SAML SSO or Username/Password, with matching email in the user's EHR profile
- Upon initial launch only, users will be asked to enter their email address (links to SAML or Username/ Password profiles)
